(a) AOCC decision epoch: similar delay, different needs

Two disrupted aircraft-linked chains await recovery review.

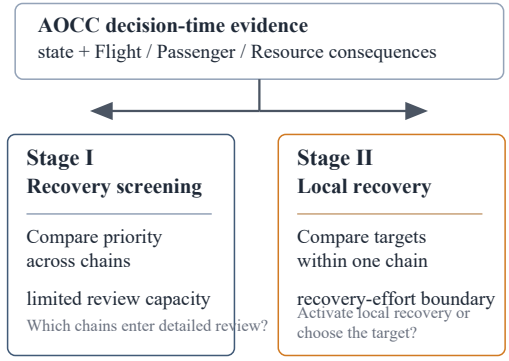
Consequence domain	Chain A	Chain B
Flight	continuity	propagation
Passenger	time exposure	itinerary
Resource	lower burden	higher burden

Similar delay does not imply identical recovery consequence.

Illustrative profile labels; no empirical values are shown.

(b) The AOCC uses the evidence in two decisions

The same state representation supports both decisions.



Information creates value when it changes the comparison that determines the active decision.
