Controlled information contrasts and decision value

Same decision-time state, different retained information

Part 1. Controlled information contrasts

What information distinction is retained?

Screening signal

Delay priority (P_D) versus Consequence priority (P_C)

same candidates and fixed review capacity

Temporal information

Current state + admissible operating history

same contemporaneous state; history is the added distinction

Uncertainty representation

Point — representative state

Marginal — marginal uncertainty

Joint — marginals + aligned dependence

Common state, consequence mapping, and decision criteria are held fixed.

Part 2. Stage I screening

Where can the information difference change the shortlist?

Common consequence mapping

Flight · Passenger · Resource

Top-K shortlist

shortlist change · retained value · L_{att}

Part 3. Stage II local recovery

Within the same shortlisted cases, what target is supported?

Fixed HJ reference cohort R^*

Activation + target u^*

activation · effective target · L_{rec}

Decision changes and losses use one common reference criterion.
